

schülke – experts in infection prevention – offer a range of innovative skin and woundcare products, designed to meet the needs of both primary and secondary care. New octenicare® Repair Creme, is specifically formulated to support natural regeneration of the skin following varicose eczema flares, incontinence associated dermatitis, under compression bandages on the lower limbs, to protect the skin in skin folds and in the non-active phase of atopic dermatitis. It can be used in conjunction with octenilin® wound irrigation solution and octenilin® wound gel as part of the wound healing process, particularly at the epithelisation stage.

schülke also supports health professionals by offering a range of online evidence-based CPD courses: <https://www.schuelke-learning.com/course/skin-integrity-in-practice>
